

Inlet nozzles Wall transitions made of stainless steel (AISI 316)

There are many standards involved in the field of water. Our standard is perfection.

Inlet nozzles enable the water inflow and, in correlation with the number of nozzles and pumping capacity, they are directionally adjustable and responsible to a high degree for pleasant and perfect pool flow.

Made from the highest quality and extremely resistant stainless steel (to the AISI 316 standard), they are a combination of aesthetic design and the high quality standard of BEHNCKE products. Made in Germany.

Round wall inlet nozzle.

In the case of this high-quality inlet nozzle, the faceplate and threaded connector are pressed as one unit for concrete (gunite) pools. It is optionally available for vinyl liner pools with flange set (flange, seal and screws) or separately. With the 1" nozzle it is possible to achieve a flow rate of 40 gpm. Wall transition purchased separately.

CUBE-Line wall inlet nozzle.

Functionally constructed the same as our round nozzle, the CUBE-Line nozzle offers a square, contemporary design that is uncommon in pool construction.

Available for both concrete (gunite) and liner pools. Wall transition purchased separately.

Inlet nozzles
Wall transitions
made of stainless steel (AISI 316)

Our quality aspiration is that not a drop ever falls in the wrong place.

For BEHNCKE products, this means a high quality standard that requires a love of detail, and particularly so with stainless steel. At BEHNCKE all wall transitions are therefore equipped as standard with protective caps that allow no installation contamination whatsoever to enter. In addition, integrated grounding lugs provide for lasting safety.

Wall transition for concrete (gunite) pools.

Our wall transition made of passivated stainless steel and equipped with a built-in water stop meets building standard 18195 and is suitable for concrete (gunite) pools. The integrated masonry collar causes a high anti-capillary effect for durable sealing. An adapter to 2" slip is included. Nozzle purchased separately.

Wall transitions for liner pools.

These wall transitions are particularly suitable for private liner pools. Thanks to the small flange, a well-designed, complete and therefore aesthetic cover can be achieved. An adapter to 2" slip is included. (Flange, gasket and screw set is included with nozzles for liner pools.)
